PROFESSIONAL SUMMARY

QA Engineer with 5+ years of software engineering experience, bringing deep API testing expertise, automation engineering capability, and native Arabic fluency to the quality function. Proven track record testing complex API-driven systems with 500+ integrations across ERP, fintech, HR, and payments domains. Skilled in writing and executing bilingual test cases, validating Arabic RTL UI/UX, and building automated test pipelines in CI/CD environments. Experienced with AI-assisted tooling (Cursor, GitHub Copilot, Codex) to accelerate test case generation and edge-case coverage. Passionate about shifting quality left — embedding test thinking into requirements and acceptance criteria before a line of code is written.

KEY ACHIEVEMENTS

- Designed and executed API test suites across 500+ enterprise integration endpoints — validating REST webhooks, JSON payloads, auth flows, and error handling across ERP, CRM, HR, and payments systems.
- Owned Arabic localisation quality end-to-end across production systems: validated RTL rendering, Arabic copy accuracy, locale formatting, and language-switch flows across web and mobile.
- Built and maintained CI/CD pipelines (GitHub Actions + Docker) with automated quality gates — achieving 99%+ uptime across multi-tenant enterprise environments.
- Identified and eliminated 40%+ database query latency through systematic performance testing and query analysis on high-traffic Laravel applications.
- Delivered 10+ production systems covering embedded finance, payments, HR, and logistics — with full negative testing, edge case coverage, and regression suites.

TECHNICAL SKILLS

API Testing	Postman, REST API validation, webhook testing, JSON schema validation, auth flow testing (OAuth2, API keys), negative testing & edge cases
Test Automation	Playwright, Cypress, Selenium — UI & API layer automation; pipeline integration via GitHub Actions
Performance Testing	k6, JMeter — load testing, response time benchmarking, bottleneck identification
Security Testing	OWASP ZAP, Burp Suite — API security scanning, input validation, auth vulnerability testing
CI/CD & DevOps	GitHub Actions, GitLab CI, Docker — automated quality gates on every build
Arabic & RTL QA	Native Arabic fluency — UI copy review, RTL rendering validation, bilingual test case authoring, locale & input testing
AI-Assisted Testing	Cursor, GitHub Copilot, Codex — AI-accelerated test case generation, edge case synthesis, synthetic data creation
Languages & Stack	PHP/Laravel, Node.js, JavaScript/TypeScript, React — used for white-box testing, API inspection, and test tooling
Databases	MySQL, PostgreSQL, Redis — data validation, state verification, query performance analysis
Methodologies	Shift-left QA, BDD, Agile/Scrum, test planning, UAT coordination, bug reporting in Arabic & English

WORK EXPERIENCE

Senior QA & Integration Engineer

2023 – Present

Bander Trading Company | Riyadh, SA

- Designed and executed API test plans across 500+ enterprise integration endpoints — validating REST APIs, webhook callbacks, authentication flows, and JSON payload contracts between Evix ERP and client systems.
- Owned Arabic language quality end-to-end: reviewed UI copy, error messages, onboarding flows, and legal text across production systems; authored bilingual (Arabic/English) test cases and bug reports.
- Tested and validated embedded finance workflows including payment gateway integrations, WhatsApp API, inventory sync, and multi-step approval workflows — covering positive, negative, and edge case scenarios.
- Built automated regression suites and wired them into GitHub Actions CI/CD pipelines — enabling quality gates on every build across multi-tenant SaaS environments.
- Performed performance and load testing on high-traffic Laravel applications — identified 40%+ query latency reduction opportunities through systematic profiling.
- Validated real-time WebSocket behaviour and concurrent session handling on a logistics platform scaling to 7,000+ active delivery agents.
- Used AI tooling (Cursor, GitHub Copilot, Codex) to generate test cases, synthetic data, and edge case scenarios faster — applying human judgement on complex domain logic.
- Collaborated with product and engineering squads to define acceptance criteria and coverage expectations before development started — embodying shift-left quality principles.

Full-Stack & QA Developer

2022 – 2023

Smart System | Riyadh, SA

- Tested and validated automated operational workflows for Restaurant Management and Hotel Reservation systems — full functional, regression, and integration test coverage.
- Authored and executed test plans across web and mobile surfaces; validated Arabic RTL rendering, bilingual UI flows, and locale-specific formatting.
- Integrated third-party API test suites into the CI/CD pipeline; conducted API contract testing using Postman across all back-end services.
- Delivered responsive internal dashboards tested across devices; validated accessibility and non-functional requirements.

Freelance QA & API Integration Developer

2021 – 2022

Self-Employed | Remote

- Delivered end-to-end QA for custom workflow automation and API integration projects — including test planning, API testing with Postman, and regression testing.
- Validated data integrity across automated pipelines; authored Arabic and English test documentation for client handover.

Full-Stack Developer

2020 – 2021

SKYSOFT | Sanaa, Yemen

- Developed and tested cross-platform mobile applications (School Management, E-commerce, Hotel Booking) — validated RTL Arabic interfaces and REST API integration across Flutter front-ends.

EDUCATION

Bachelor of Information Technology | IBB University, Yemen | May 2020

LANGUAGES

Arabic — Native | **English** — Professional Working Proficiency
